

Perfect decontamination

Hygienic washing machines and dryers with ozone generator

Ozone is a natural gas that becomes pure oxygen in contact with water and acts by dissolving organic matter.

An **ozone generator** is a device that connects to a washing machine, mixes ozone with water and acts on viruses and bacteria in the process of laundry washing. Ozone attacks the cell membranes that cover them and deactivates them. The result is clean and disinfected laundry.

TECHNOLOGY IN THE SERVICE OF HEALTH

 **LG professional washing machines**

+ **BW^{O3} ozone generator**

DISINFECTION EVEN IN COLD WATER

Say goodbye to disinfection with high temperature washing. Ozone-enriched water disinfects, eliminates bacteria, neutralizes viruses and removes odors even in a cold water washing program.

SAVE WITH EVERY WASH CYCLE

Ensure multiple savings with ozone and spend less water, detergent and time. Costs per cycle are reduced up to 50% in comparison to the same ozone-free cycle*.

LINEN SOFTNESS WITHOUT SOFTENER

Ozone, in addition to removing all unpleasant odors, enters the structure of the fabric and makes it soft. This completely eliminates the need for fabric softener.

IN HARMONY WITH NATURE

The all-natural disinfection process without harmful chemicals or other by-products makes ozone ideal for people prone to allergies. Energy savings make it safe for the environment as well.

* The cost is estimated and varies depending on the soiling of the laundry, the use of detergent and other conditions

NEW TECHNOLOGIES

Waveforce and **Auto tub clean** programs with strong water waves, maintain maximum cleanliness of the washing machine during washing.

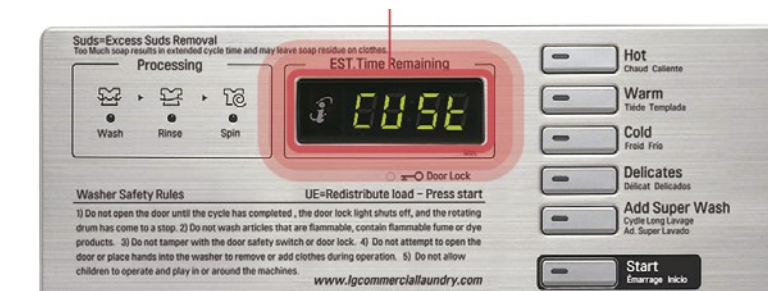

ANTIBACTERIAL DESIGN

Antibacterial coatings prevent the retention of bacteria (Staphylococcus aureus, Salmonella, Listeria, etc.) and mold in the drum of the washing machine.

HYGIENE PROGRAM

A customized washing program ensures complete disinfection and the best washing performance.

LG professional washing machines and dryers

CAPACITY
10 kg
max 13 kg

TOTAL POWER
3.6 kW

QUICK PROGRAMS

LARGE DRUM VOLUME
103 l

WASHING MACHINE GIANT C

DRUM	
Drum volume	103 lit
Capacity	10 kg
Max capacity	13 kg
POWER AND VOLTAGE	
Energy consumption (kW)	3,6 kW
Voltage (V)	220 V
Frequency (Hz)	50 Hz
TECHNICAL FEATURES	
Spin speed	1150 rpm
G-force	413
Appliance weight	90 kg
Pump drain	Yes
Noise level (dB)	<62dB
Dimensions (WxHxD) mm	686x983x767

CAPACITY
10 kg

TOTAL POWER
5.4 kW
